

# ***KAYA 2015 PRODUCT GUIDE***

TARGET ARCHERY | KOREAN TRADITIONAL ARCHERY

## **PRESIDENT'S MESSAGE**

---

*Our ultimate goal is not only to produce the best quality archery products, but also to satisfy customers with our products in overall qualities including design and price. The quality of our products is excellent value for money. We use only highest quality raw materials. We have been steadily studying the stylish design as well as applying the sophisticated design on our products.*

*And we finish the every single product in the production lines with the craftsmanship. Of course, we know that it is still a long way to go to achieve our goal. However, we will not stop trying until we achieve that goal. Thank you.*

**Mr. Kwak, Yun-Sik**

-President of Kaya Archery

-The 1<sup>st</sup> Man who Broke 1300 Points in Archery in South Korea.

-Korea Archery Association Member for 10 Years

-South Korean National Team for 5 Years

-Over 22 Years of Experiences in Archery Manufacturing

-Bow Shooting Career for 35 Years

## PROFESSIONAL RECURVE RISER

### FEATURES OF K3 CARBON RISER

By helping to make archery bows lightweight-heavy impact, Rigidity-Strength, Vibration Control-Stiffness and Durable-Impact Resistance, carbon fiber technology is the key to staking out a competitive edge in professional archery bow manufacturing.

#### 1. Lightweight – Heavy Impact

Lightweight materials and design have always been an important topic in archery products. Carbon fiber is currently the most discussed lightweight material due to its high potential for weight reduction in certain applications.

#### 2. Rigidity – Strength

Carbon fiber is heralded for its strength, rigidity and ability to be cast in shapes that would be virtually impossible with other materials. Carbon fiber is now commonly used in KAYA Archery's high quality products.

### SPECIFICATION

## PROFESSIONAL RECURVE RISER

### Solid Wooden Grip

### K7 RISER - 100% PURE CARBON

Carbon is an increasingly popular non-metallic material commonly used for archery bows. Although expensive, it is light-weight, corrosion-resistant, strong, and can be formed into almost any shape desired. The result is the K7 Carbon Riser that can be fine-tuned for specific strength where it is needed. The KAYA K7 Carbon Riser is designed with the feature of vibration damping that is strong with any type of shooting or form. The ability to design 100% pure carbon with properties that vary by orientation cannot be accomplished with any metal risers. This carbon material provides light weight as well as high strength.

### K STORM PROFESSIONAL LIMBS

It's made from strong, beautiful materials like Carbon Fabric and Graphite Foam. It's produced using the latest technology - powerful processors, advanced graphics, and fast speed. And it has features you won't find on other archery limbs. So, from the outside in, a KAYA bow is designed to be a better archery bow. The K7 is designed for a long, productive life. KAYA designers and engineers spend countless hours ensuring that each K7 is precisely built - inside and out. From the down-to-the-micron fit of each internal component to the finish of the enclosure, every detail matters. The result is a K7 that is thin and light, looks polished and refined, and feels strong and durable. To make a better Archery bow, only quality components and materials will do. That's why every KAYA product contains a high quality carbon fabric, graphite foam, advanced design, and even small tip parts to give you the best performance possible. Keep all those high-performance components speed and accuracy.

### FEATURES OF ACE TRIPLE CARBON STABILIZER

Why KAYA realizes the ACE triple carbon Stabilizer?

KAYA Triple Carbon Stabilizer is operated with high quality triple carbon on the rods. It can make excellent performance at the shooting, impact resistance, weight reduction, strength and wear resistance. Therefore, triple carbon layer can hold each other and it bond two, three carbon on each side of the layers. That way, in particular, the carbon can bond to at least two more, one in front, one in back.

# REINFORCED ARCHERY SLING

## Reinforced Archery Sling

### 1. Is it the shoelaces?

Yes, it is shoelaces but it is not normal shoelaces.

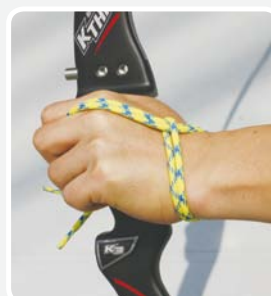

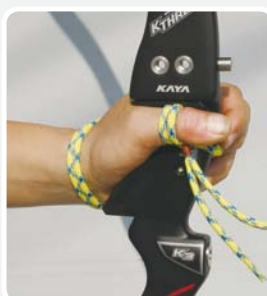

### 2. What is different?

It is developed specially for the archery sling as material, thickness, strength and etc. Many KAYA members have experience about archery slings that is important for the shooting. However it can be painful because the sling will be stretch. KAYA Reinforced Archery sling solved the problems. It can be very help ful for the Archers.

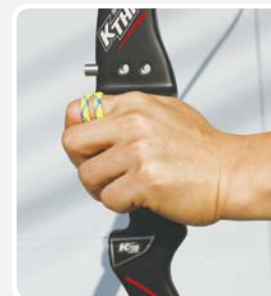

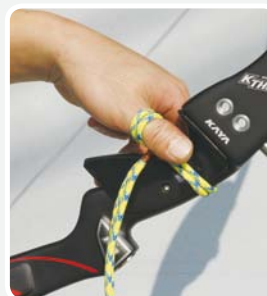

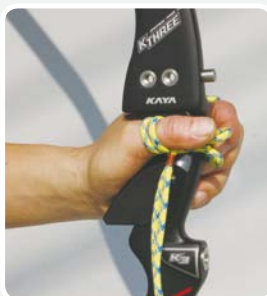

- Excellent Tensile Strength
- Special development by KAYA Archery

## SPECIFICATION

Length	Thickness	Color
1200mm	5.5mm	Yellow or Blue

# COMPOUND BOW PRESS

The KAYA Bow Press is design to work on all compound bows that do not have beyond parallel limb designs.

- 1. Portable Bow Press**
- 2. Light Weight - 4.5 kg (9.9 lbs)**
- 3. Fast, easy to use**
- 4. Unique design**
- 5. Affordable Price**

## 1.

PLACE ON A TABLE OR COUNTERTOP WITH THE HANDLE TO THE RIGHT.

## 2.

PLACE THE BOW LIMBS WITHIN THE LIMB SUPPORT RODS AS SHOWN IN THE ILLUSTRATION. ADJUST THE DISTANCE BETWEEN THE ARMS SO THEY ARE AT A 90 DEGREE ANGLE TO THE CENTER ROD.

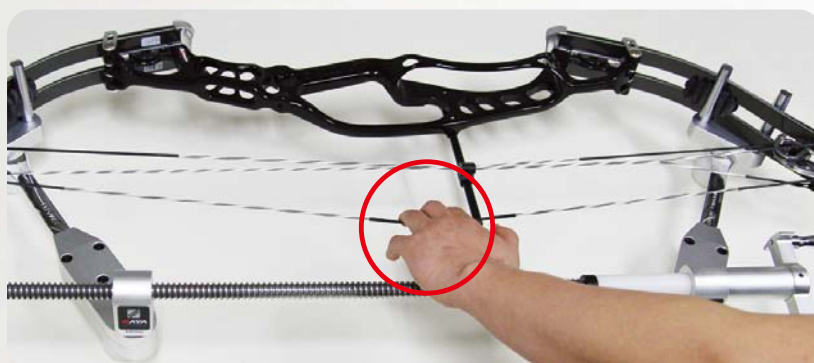

## 3.

ROTATE THE LIMB SUPPORT RODS SO THEY ARE SECURELY HOLDING THE BOW LIMBS IN POSITION. THE OUTER MOST ROD OF EACH SUPPORT ARM SHOULD BE APPROXIMATELY 1 - 2" FROM THE CAM.

## 4.

TWIST THE LENGTH ADJUSTMENT HANDLE SO THE PRESS ARMS ARE DRAWING CLOSER TO EACH OTHER.

## 5.

CONTINUE TWISTING THE HANDLE UNTIL ENOUGH TENSION IS RELEASED FROM THE STRING AND CABLES TO PERFORM THE DESIRED WORK. BE CAREFUL NOT TO OVER BEND THE BOW LIMBS.

# ***KOREAN TRADITIONAL ARCHERY***

***HOW TO STRING  
THE KTB***

**KT3****KOREAN TRADITIONAL BOW****THE KEY NOTE OF KAYA KT3**

Steeped in tradition and history of Korean craftsman over millennia, these traditional bows are individually hand crafted by one of Korea's finest bowyers, Mr. Kwak Yun-sik. Each bow is a true masterpiece and is stamped with his official seal. These bows may be shot either right or left-handed. It features a new attractive wrapped finish. This more traditional look will also help keep limbs from being scratched or dented.

- Bare Bow Type (no sight, no arrow rest, no cushion plunger)
- Maximum shooting distance : 400m
- Field, recreational & hunting archery
- Carbon, fiber glass and hard maple limb face covered with decorative leather

# KAYA KMG TURKISH BOW

**NEW  
2015**

## KAYA KMG TURKISH BOW

The new model, Kaya Turkish Bow is the result of our accumulated experiences in traditional bow manufacturing. It is born by adding elasticity to traditional Turkish bow on the base of softness and beauty of curve in Korean bows.

### SPECIFICATION

Bow Length	Draw Weight	String
54"	30 / 35 / 40 / 45 / 50 / 55 or 60#	Fast Flight

Shoot either RH or LH users		

MADE IN  
KOREA

# FIREFOX

## FIREFOX KOREAN TRADITIONAL BOW

### FIREFOX KOREAN TRADITIONAL BOW

We also have the KTB bow that has sheepskin backing, but it is not favored by some archers. Because we have received many requests for a bow without this type of backing, we developed a new type of KTB we call the Firefox. It is exactly the same as the KTB, but with a different finish.

· Carbon, Fiber Glass and Hard Maple

### SPECIFICATION

# KHAN HORSE BOW

**NEW  
2015**

## KOREAN TRADITIONAL HORSE BOW

A similar limb design to the Korean Traditional Bow guarantees a silky smooth. It features a leather wrapped handle section with a crowned arrow shelf cut nearly to center. Experience great arrow flight and impressive arrow velocity with very little hand shock. The lightest hunting bow on the market, the Khan® weighs less than 1 lb. and is only 48" long, tip to tip when strung. Limbs are made with laminated maple, fiber glass and carbon mycarta limb tips, and a rosewood handle riser.

### SPECIFICATION

Bow Length	Draw Weight	String
52"	30 / 35 / 40 / 45 / 50 or 55# @31"	Fast Flight
Type		
Shoot either RH or LH users		

MADE IN  
KOREA

## KTB SET Korean Traditional Bow Set

## Korean Arrows

Korean arrow is made from fiberglass and carbon and is especially manufactured to shot from most Asian Traditional bows. Fletched with vanes with points installed. Available in 4 lengths up to 33.5" long.

## Thumb Ring

Authentic style made from real cow horn. This deluxe model has a raised ring for the string to lay on instead of against the flesh. Produces a better release and no thumb pain. 4 sizes : small, medium, large & ex-large. Includes carrying pouch and instructions for usage.
